

Workrr Marketing Plan

A practical go-to-market plan for creating demand, qualifying customers, and building a repeatable category position.

Built for practical private AI

A Cloudflare-native framework and operating application for turning repeatable manual work into governed, measurable AI processes.

Intended audience: Founder, marketing partners, sales leadership, and channel partners

Prepared: July 2026

Status: Working product document - customer language should be validated during discovery.

Executive Summary

Workrr should be positioned as the private AI process platform for mid-market organizations that need implementation help, not another do-it-yourself chatbot. The commercial wedge is one measurable manual process. The expansion motion is a governed catalog of department processes operated on one customer platform.

Market Position

Element	Position
Category	Private AI operations and process enablement
Primary buyer	COO, CIO, operations leader, customer service leader, or transformation sponsor
Primary user	Employees, reviewers, process owners, operators, and forward-deployed engineers
Customer profile	Mid-market SMB with meaningful process volume and limited AI development staff
Core promise	Move from manual work to a governed production AI process without building the platform foundation from scratch
Differentiator	Cloudflare-native application, agent framework, delivery playbook, human controls, and value evidence in one system

Ideal Customer Profile

- 100 to 2,000 employees, often operating across several locations or service teams.
- Repeated email, document, customer, case, finance, HR, or operations workflows.
- Executive pressure to improve throughput or service without matching headcount growth.
- Limited internal engineering capacity and concern about unmanaged public AI use.
- Available process owner, representative examples, and willingness to run a bounded pilot.
- Best initial vertical hypotheses: professional services, insurance and benefits, logistics, specialty healthcare administration, field services, B2B customer operations, and multi-location service businesses.

Personas and Buying Motives

Persona	What They Care About	Message
Operations executive	Time, throughput, consistency, customer experience	AI-ify a real process and measure the returned capacity.
CIO / IT leader	Security, architecture, support burden, integration	One Cloudflare-native control plane instead of disconnected experiments.
Risk / privacy leader	Data handling, accountability, evidence, retention	Process-specific authority, human control, tenant isolation, and audit evidence.
Department owner	Backlog, quality, adoption, exceptions	A solution designed around your actual work and owned by your team.
Finance sponsor	Cost, payback, scalability	Baseline the manual work, meter AI usage, and expand only where results justify it.

Messaging Architecture

- **Headline:** Private AI that performs real business work.
- **Value statement:** Turn repeated manual processes into governed AI capabilities with a forward-deployed implementation path.
- **Proof pillars:** private Cloudflare architecture; process-specific agents and workflows; human approvals and evidence; measurable value; reusable customer deployment.
- **Avoid:** leading with model names, claiming full autonomy, presenting a generic chat demo, or promising savings before discovery.
- **Tone:** practical, credible, plain-language, operational, and respectful of customer risk.

Offer Ladder

Offer	Purpose	Indicative Output
AI Process Discovery	Qualify one or more workflows	Process map, baseline, risk boundary, prioritized opportunity brief
Private AI Pilot	Prove one process with real users	Configured environment, tested release, training, pilot report
Production Foundation	Establish dependable operation	Identity, controls, runbooks, support model, value review
Department Expansion	Add related processes and integrations	Reusable solution patterns and shared governed services
Managed Improvement	Operate and improve over time	Monthly value, quality, cost, release, and risk reviews

Demand Generation

- **Founder-led content:** short process teardowns, Cloudflare agent architecture explanations, and before/after operating stories.
- **Open-source framework:** publish safe reusable foundations and examples while retaining implementation, customer configuration, and managed operations as services.
- **Workshops:** 'Find your first private AI process' for operations and technology leaders.
- **Assessment:** a scored manual-process intake that produces a practical opportunity brief.
- **Partner motion:** Cloudflare consultants, managed service providers, fractional CIOs, and vertical operations advisors.
- **Case-study motion:** quantify baseline, pilot result, safeguards, user adoption, and next expansion decision.

Content Program

Theme	Example Content	Call to Action
AI process design	Why a process is more valuable than a chatbot	Download discovery checklist
Private architecture	Ephemeral Workers and durable actors explained	Architecture review
Human control	What a good AI approval screen must show	Governance workshop
SMB implementation	How to pilot without an AI team	Book discovery
Value evidence	Measure time returned without fake ROI	Baseline calculator

Theme	Example Content	Call to Action
Build in public	Workrr feature demos and release notes	Try the framework / join updates

90-Day Launch Plan

Period	Objectives	Key Actions
Days 1-30	Clarify story and create sales foundation	Finalize positioning; publish product page; package pitch, checklist, architecture review, and one demo process; identify 50 target accounts.
Days 31-60	Generate conversations and learn	Run two workshops; publish weekly founder content; conduct 10 discovery calls; recruit 2 design partners; refine objections and vertical signals.
Days 61-90	Convert proof into repeatable motion	Launch one pilot; publish an anonymized process teardown; formalize partner brief; create case-study template; review funnel and narrow ICP.

Funnel and Metrics

- Awareness: qualified site visits, guide downloads, workshop registrations, partner introductions.
- Engagement: discovery calls, completed process assessments, identified owners, qualified use cases.
- Pipeline: paid discoveries, pilots proposed, pilots started, sales-cycle duration.
- Delivery: time to first tested process, pilot adoption, accepted output, exceptions, support burden.
- Commercial: pilot conversion, annualized contract value, gross margin, expansion processes, retention.
- Do not optimize for raw leads. Optimize for conversations with a real process, owner, data, and measurable pain.

Risks and Mitigations

- Risk: category sounds broad. Mitigation: lead with specific process examples and one department outcome.
- Risk: open source attracts builders but not buyers. Mitigation: separate framework content from the implementation and operating offer.
- Risk: privacy claims become absolute. Mitigation: describe architecture and policy precisely; validate provider terms and customer requirements.
- Risk: pilots stall after demos. Mitigation: require owner, baseline, acceptance criteria, users, and expansion decision before build.
- Risk: custom services do not scale. Mitigation: convert repeated delivery work into solution packs, templates, tests, and product controls.
